

Product Data Sheet

Acrylic5X Acrylic POS unit

Application:

The Acrylic5X point of sale unit is the perfect solution for CI integrators wishing to demonstrate the sonic qualities of an AIW5X Loudspeaker whilst displaying a product which would otherwise be 'invisible' when installed.

Whether used on a retail counter top or as an exhibition display piece, the Acrylic5X is a fantastic way to see and hear this unique technology.

Made from clear acrylic, the front and rear of the embedded AIW5X speaker can be seen by clients as though they were viewing it through a wall!

A 2mm thick layer of acrylic covers the front of the speaker, replacing the usual 2mm skim coat of plaster, providing an equivalent acoustic performance.

Quick and easy connection to your amplifier is possible via a rear mounted spring clamp terminal. The unit also comes complete with a stabilising acrylic plinth.

Optional Extra: If you are transporting the Acrylic5X, you can also request a flight case which will protect the Acrylic5X from any damage during its transportation.

Specifications	Acrylic5X
Electrical connection	Spring clamp terminal for bare wire
Dimensions	600mm x 450mm x 150mm (23 ^{5/8} x 17 ^{3/4} x 6")
Product weight	8kg (17.63lbs)
Frequency response	100Hz - 20kHz
Power handling	80W max
