

## Press Release

### **Amina Introduces APU-R Rack Mount Filter Protection Unit**

**Cincinnati, OH, United States, 05/22/2009 - New unit gives AV integrators a rack mounted protection system that is ideal for distributed audio systems.**

Amina Technologies is pleased to announce the launch of the APU-R 8-channel Rack Mount Filter Protection Unit. Amina has improved the AIWX Invisible Loudspeaker Series to make installation of Amina loudspeaker systems easier for AV professionals and systems integrators in large commercial and residential installations.

The new APU-R enables installers to protect up to 8 Amina speakers centrally via a standard 19" 1U enclosure. This 8-channel system is totally passive, and each channel has its own selectable jumper to enable it to handle the entire Amina AIWX loudspeaker range (AIW1X through AIW5X) within a single component.

As well as being styled to blend in with other elite equipment, the APU-R provides a high-pass filter to ensure that the Amina speakers are not fed with excessive base frequency. In addition, it also features thermal fusing so that the loudspeakers are not overdriven accidentally. Speakon® Connectors, located on the rear panel, are used for input/output connections. The new unit also meets all the required criteria for the Amina 10-year AIWX loudspeaker warranty.

The APU-R is available now in the USA and Canada through Certified Amina Dealers, and worldwide via Amina's authorized distributor network. It will be on display in Booth 5773 at InfoComm 09 in Orlando, FL, June 17-19.

#### About Amina Technologies

Amina Technologies Ltd ([aminatechnologies.com](http://aminatechnologies.com)) is the world's leading supplier of completely invisible loudspeaker solutions engineered to provide incredible, invisible sound for luxury homes and high-end commercial spaces. Architects, interior designers, and audio installers can now work together in harmony to design a sound system that results in absolutely no visual interference with the interior

design.

Amina's design and manufacturing headquarters are located in Cambridgeshire, UK, the heart of Britain's technology belt for audio design excellence and for aerospace composite panel production. In addition to managing sales and marketing offices in the USA and Canada, Amina distributes throughout Europe and the rest of the world via a network of global distributors.
