

Press Release

Amina to Present Full Range Invisible Speaker Solution at ICFF

Cincinnati, OH, United States, 04/16/2010 – New hidden subwoofer complements the renowned AIWX invisible speakers.

Amina Technologies, a world leader in invisible sound solutions, announced plans to present a complete full range invisible audio solution at the 22nd Annual International Contemporary Furniture Fair in New York City, May 15-18, 2010. The ICFF is North America's singular showcase for contemporary design with an expected 25,000 people attending the four day exhibition.

Amina will be demonstrating a full range invisible speaker solution that combines the award winning AIWX Invisible Speaker with the all new ALF40 hidden subwoofer to form the perfect audio speaker system for design-conscious buyers and designers.

At the heart of the system is the world renowned AIWX flat panel speaker. Designed to be skimmed over with up to 3/16" of plaster or drywall compound, the AIWX provides a totally concealed audio solution that allows complete interior design flexibility without the visible presence of speakers.

To provide enhanced low frequency performance, Amina has introduced the compact ALF40 Bass Enhancer. The ALF40 is the first subwoofer Amina has designed and engineered specifically to complement Amina's current line of invisible speakers. Because of its unique hidden design and formidable sonic performance characteristics, the ALF40 can also be incorporated into any conventional speaker system where minimal visual impact of the subwoofer is required.

Amina will be located in Booth 2419 in the Jacob K. Javits Convention Center.

About Amina Technologies

Amina Technologies Ltd (AminaTechnologies.com) is the world's leading supplier of completely invisible loudspeaker solutions engineered to provide incredible, invisible sound for luxury homes and high-end commercial spaces. Architects, interior designers, and audio installers can now work together in harmony to design a sound system that results in absolutely no visual interference with the interior

design.

Amina's design and manufacturing headquarters are located in Cambridgeshire, UK, the heart of Britain's technology belt for audio design excellence and for aerospace composite panel production. With offices and warehouse facilities in the UK and North America, Amina distributes throughout Europe and the rest of the world via a network of global distributors.
