Amina Introduces New AIWX Invisible Speakers

[NewsWireToday](#) - /newswire/ - Cincinnati, OH, United States, 07/22/2008 - The new AIWX range of speakers has been developed in conjunction with the proprietary APU2 protection unit for a complete invisible sound solution.

Amina Technologies is pleased to announce the launch of their new AIWX range of invisible Plaster In-wall loudspeakers and the all new and proprietary APU2 protection unit. This new development has allowed Amina to extend the standard warranty period for the AIW speakers by over 40% to an industry leading ten years.

Located between the amplifier and the AIWX speakers, the APU2 unit provides a High Pass filter facility as well as DC blocking to protect the plastered in speaker. The APU2 has also been developed to directly address future situations, after installation, where amplifiers are replaced or a new resident acquires the property in which the speakers are installed. This protection unit also features an integral auto-reset thermal fuse which prevents users from inadvertently over-driving the plastered in speakers.

Provided the AIWX loudspeaker and the APU2 are installed correctly (which is a very straight forward process) and the system is properly matched with the amplifier and electronics, the result is an extremely reliable and long-term invisible sound solution.

The new 10 year warranty runs from date of purchase for 10 years and is available on all speakers in the AIWX range that are installed by Certified Amina Dealers according to the manufacturer's guidelines. The new range is compatible and complementary to the existing AIW range.

The AIWX lineup also includes the new APU2 inline filter protection unit, which provides low frequency and over-current protection for the AIWX speakers. The new AIWX speakers are now backed by an industry-leading 10 year limited warranty. "Our new AIWX invisible speakers allow us to provide our customers with the most reliable invisible speaker solution possible", said Richard Newlove, Managing Director / CEO of UK-based Amina Technologies. He added, "The AIWX are so reliable that we have lengthened the warranty period yet again. We're very excited to present these new products at CEDIA Expo."

The new AIWX speakers are available now in the USA and Canada through Certified Amina Dealers, and worldwide via Amina's authorized distributor network, and will be on display in Booth 174 at CEDIA Expo 2008.

About Amina Technologies

Amina Technologies Ltd (aminatechnologies.com) is the world's leading supplier of custom, completely invisible loudspeaker solutions. Using a revolutionary sound technology, Amina flat panel speakers are engineered to provide incredible, invisible sound for luxury homes and high-end commercial spaces. Architects, interior designers, and audio installers can now work together in harmony to design a sound system that results in absolutely no visual interference with the interior design.

Amina design and manufacturing headquarters are located in Huntingdon, UK, the heart of Britain's technology belt for aerospace panel production and electronics/audio design excellence. With innovative skills and technical resources at hand, Amina creates cost effective custom solutions for their distribution partners worldwide. In addition to managing sales and marketing offices in the USA and Canada, Amina distributes throughout Europe and the rest of the world via a network of global distributors.
